

How to set the QRT301 connect to Router by using the WiFi

Before you setting the QRT301, please make sure your QRT301 and PC/NB is connect to same router by the internet cable.

And then please install the IP search software on your Windows PC/NB.

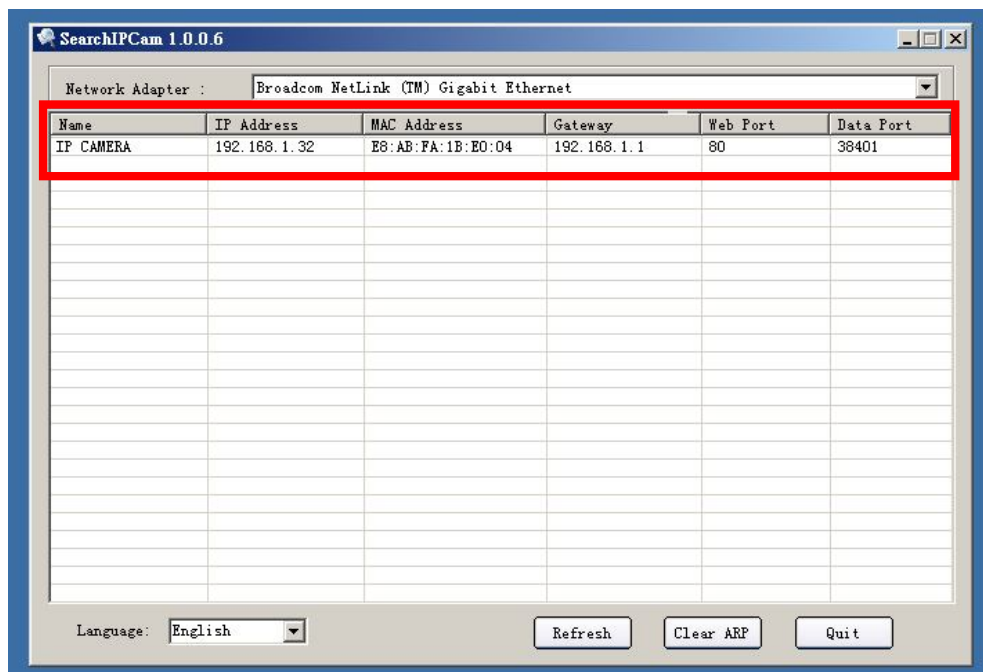

The software you can find in the CD or you can download in below link :

http://kguardsecurity.server289.com/kguard/KguardWEBSITE/CD_ISO/IPcam/QRT301/QRT-301_131204.zip

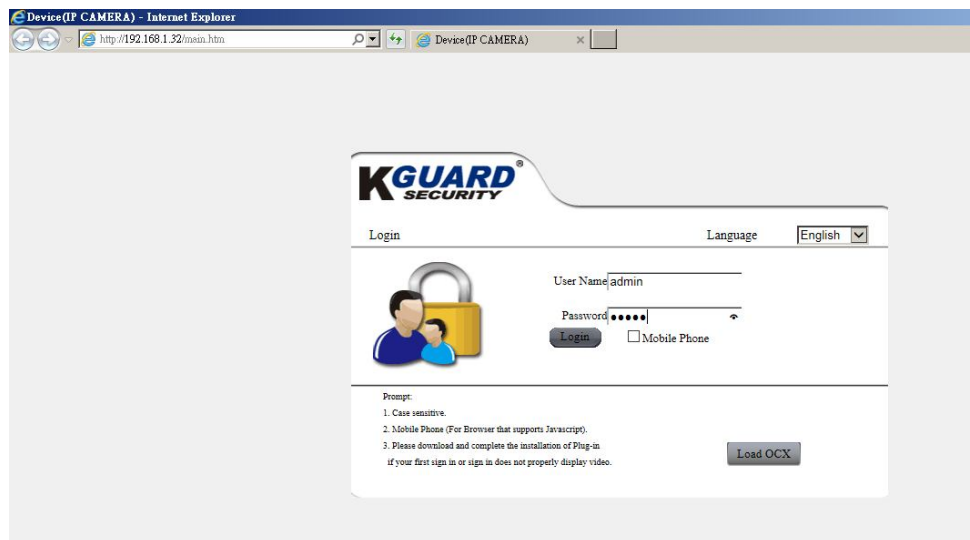

Step.1 Open the IP search software . You will view the QRT301 IP address.

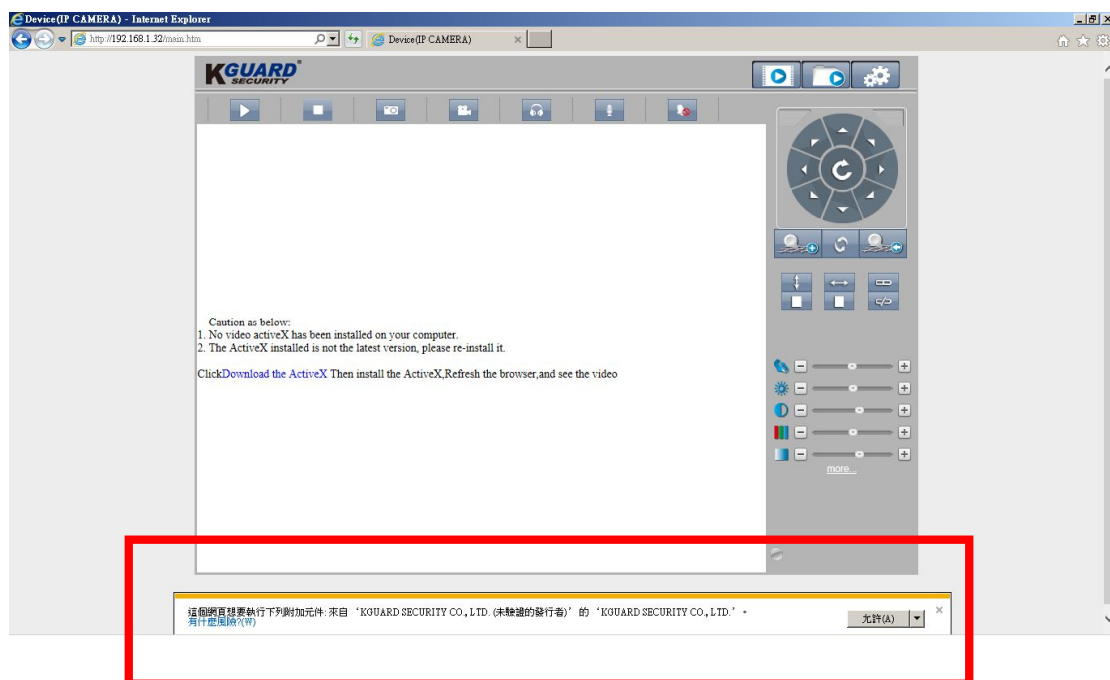

Please right click the IP address.

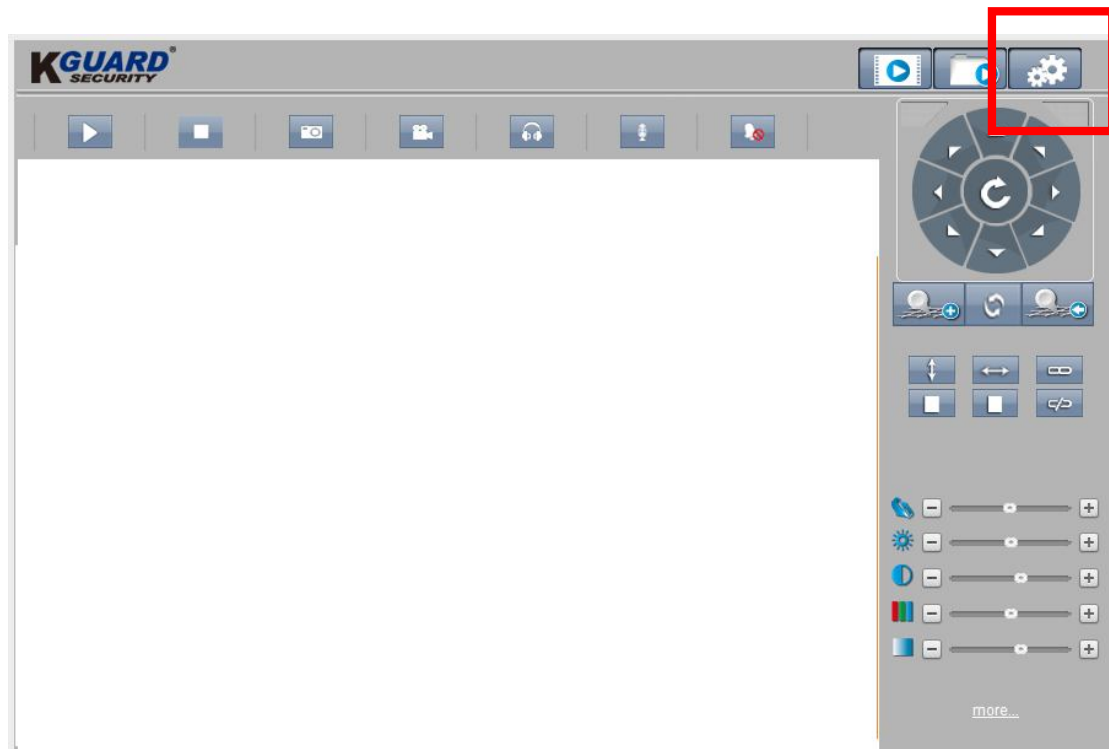

Step.2 You will view the login screen. Please enter the “Username” and “Password” to login.

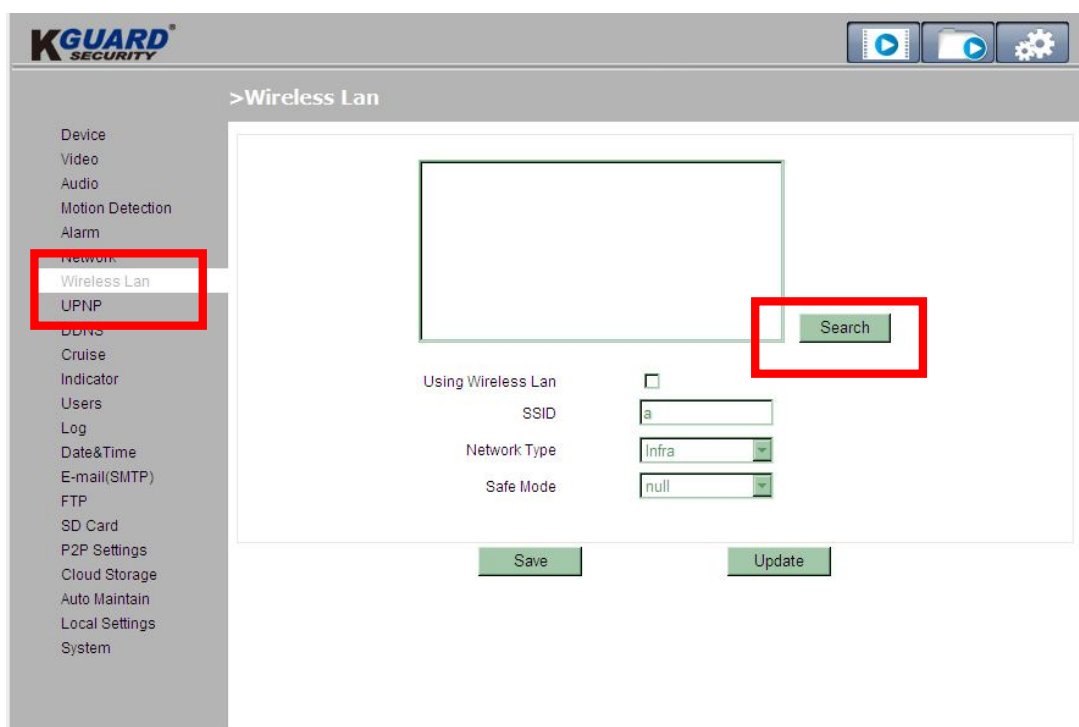

※ Notice : If you are the first time to view the QRT301 on the IE. Please install the IE package.

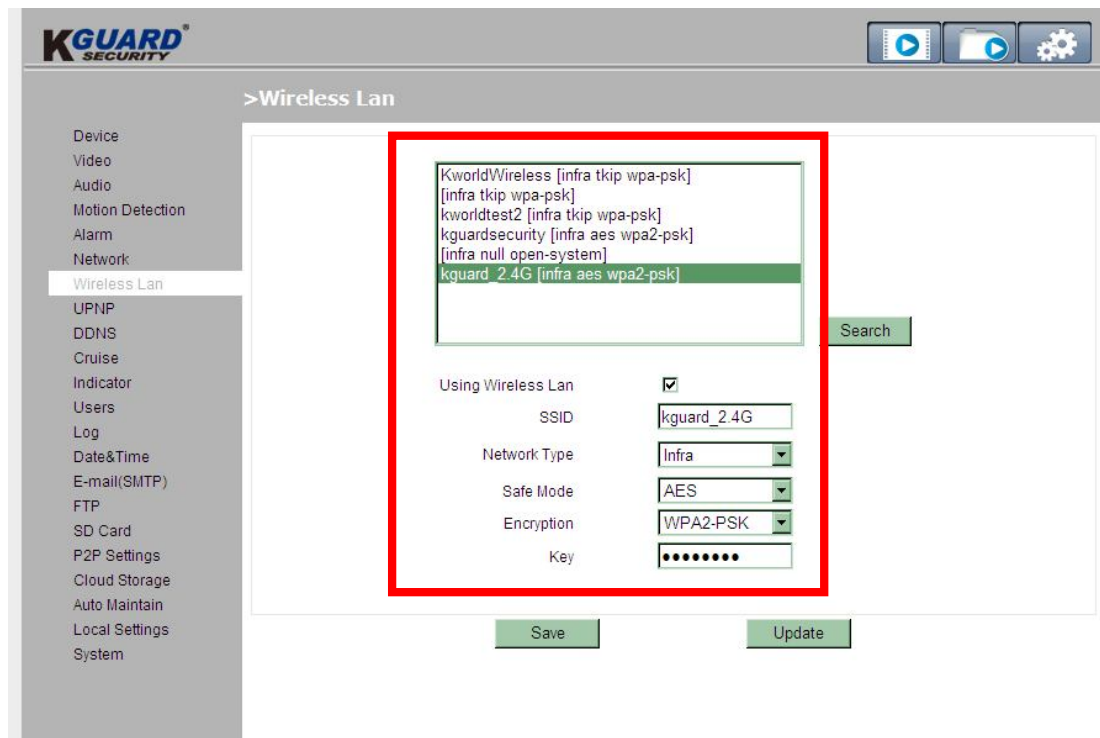

Step.3 Please click “Setting”

Step 4. Please click “Wireless LAN” → “Search” . The QRT301 will search all the WiFi in your environment.

Step5. Select the WiFi that you want to connect and make sure you're the information that you enter are current → Click **"Save"** .

After you save the setting, the QRT301 will reboot. Please wait the QRT301 finished cruise.
